

Nili Karmi

Nili Karmi is a Veterinary Science Training Program (VSTP) student in the Bannasch Lab. She is pursuing her Ph.D. in the Genetics Graduate Group and is a member of the UC Davis School of Veterinary Medicine class of 2010. Nili graduated from Ben Gurion University in Israel with a B.S. in Life Sciences in 2005. Her current research in the Bannasch Lab involves investigating the basis for high levels of uric acid in non-Dalmatian dogs (in conjunction with the Dalmatian hyperuricosuria project).

In her free time Nili volunteers at the UC Davis Veterinary Medical Teaching Hospital emergency service, reads, watches movies and, if she's lucky, goes horseback riding. She loves dogs and hopes to have one of her own soon.
